

Sall Linn Co.
4. 27. 1881.

Dear Sir! -

Your favor is at hand.

I have bought both volumes of the
Synoptical Flora of Dr. Gray and shall
be glad to get the Supplement. I include
the postage.

I find that he failed to send me Vol.
21 pp. 363-413 (1880) of his "Contributions".
I also have not received a copy of your
"Contributions" for 1890. If you will
send these I will gladly remit whatever
you ask for them. I

I will send you a plant today for iden-
tification which from the fact that it is
very abundant at the north end of the
Lyneish mts. near Lake Point where all
the sheep pass, may be a European
immigrant. I find nothing like it in
any N. A. literature.

Did I ever send you a specimen
of my *Cynopterus corrugatus*? You
that Boucher & Hess place with it a speci-
men that I gathered near Lewis Bridge
Wash. in 1850 and which you referred to
C. menhieri. I fear that they have been

too florid in the manufacture of
genera and species. I hardly think
the erection of a new species upon my
Percedanum villosum of 1850 (atoh)
will hold as I found it to vary greatly.
At my first opportunity I shall send
you some of my new species of 1888.
There are two genera that I think are
new, will send you specimens later.

I have the scabber over in my family
now and my time and strength are
more than full.

Very truly yours,

Malcolm P. Jones,
